# MAINTENANCE & CLEANING GUIDE

## ARTIFICIAL LIVING WALLS & PLANTS

Follow these simple steps to keep your artificial plants and living walls looking great for longer

### CLEANING AN OUTDOOR ARTIFICIAL LIVING WALL

Occasionally you may need to clean your Artificial Living Wall from Designer Plants, fortunately this is a very simple and easy process due to our RealTex highly durable materials which allow for easy cleaning.

- Simply hose the panel down with a mist spray nozzle, and for any stubborn dust use a cloth.

**Note: Do not use chemicals (they aren't required)**

### CLEANING AN INDOOR ARTIFICIAL LIVING WALL

Designer Plants artificial living walls require very little cleaning when inside, though to keep them looking 'fresh' we recommend one simple step:

- As required use a light misting and damp cloth to wipe the leaves down (typically every 6 months - 1 year is recommended).

**Note: Water can be used also if your surrounding space won't be damaged**

### CLEANING YOUR ARTIFICIAL PLANT

Artificial Plants are super easy to clean and can be refreshed with 2 simple steps:

- Apply artificial plant cleaner (or if you cannot access this water can also be used) to the leaves with a gentle mist (do not soak)
- Use a cloth or paper towel to wipe the leaves dry. Note: If your leaves are very dusty wipe them prior to applying the spray.

**Note: Do not use harsh chemicals (they aren't required)**

# MAINTENANCE OF YOUR ARTIFICIAL LIVING WALL OR PLANT

As with everything maintenance will prolong the appearance and life-span of your artificial plants, and we recommend a few key steps and guidelines to follow:

- Where your plant / living wall is in sunlight - apply UV protection spray (whilst our UV rated green walls do not require this - it will of ocuse assist in extending the lifespan - noting: our UV green walls already exceed industry standards on performance in direct sunlight).

## NOTES / TIPS

- Do not use excessive force to clean your plant (high pressure hoses or power tools).
- Occasionally, small leaves may fall off - these can simply be attached with glue or in many instances cable ties.
- Ladders / scaffold should not be leant up against the artificial living walls.
